A SIMPLE YET VERSATILE PNEUMATIC PUMP

IDEAL FOR USE IN SMALL AND MEDIUM SINGLE-LINE PROGRESSIVE DIVIDER SYSTEMS

LOCOPUMP S3 is an ideal single acting pneumatic pump generally used in single line progressive divider lubrication systems such as nP- nPr, SMX, SMO, SMP or SMPM.

LOCOPUMP S3 is available with 0.5 and 2 kg reservoir with spring loaded follower plate, which means it can easily handle NLGI grade 2 grease.

The transparent reservoir allows the user to clearly see the quantity of grease remaining and a low-level grease switch is present to provide remote alarm signals to the machine it is mounted on.

Additionally, the reservoir lid can be installed with a Dropsa maximum level sensing device.

High Reliability is guaranteed by the use of hardened steel in the construction in all the pumping element components and the pump piston is manufactured in ground-hardened steel.

The front Fill port is also equipped with a filling filter to ensure that only clean lubricant enters the reservoir.

The pump provides a simple but very cost-effective solution for use on many small to mid-range grease lubrication systems and is ideal to be used on machines where compressed air is available.
